

## Protect our earth

Environmental and earth protection is very important. If we do not care and protect the earth, it will be sick and getting worse day by day. Then, people will have to face a serious crisis.

To save the earth, we can do many different things at the different places, such as in the community, at home and at school.

In the community, we can bring our own bags when we shop. We can use handkerchiefs rather than tissues to reduce waste. We should not throw rubbish into the sea, too. We should throw it into the rubbish bins. We should also walk or take public transport such as trains, buses and minibuses whenever we can.

At home, we can take a shower instead of a bath to save water and electricity. We can also turn off electrical appliances when we don't need them in order to save energy. During day time, we can open the curtains and make use of the natural sunlight so as to use less electricity for the light bulbs.

At school, if it is not too hot, we can use fans instead of air conditioners to save more energy. The students should put the bottles and cans into the recycling bins,

too.

Saving the earth and the environment is a really important issue. We must cherish our resources and protect the earth and the environment. So everyone should take action to save the earth and the environment immediately!
